Abstract The purpose of this study was to determine the effect of a 12-week training program on the heart rate variability (HRV) of young adults. The study was conducted in a laboratory setting. The participants were 20 young adults (10 males and 10 females) who were randomly assigned to two groups: a control group and a training group. The control group did not participate in any training program, while the training group participated in a 12-week training program. The HRV was measured using a heart rate monitor. The results showed that the training group had a significantly higher HRV than the control group at the end of the 12-week training program. This suggests that the training program had a positive effect on the HRV of young adults.

Eggs: red. 4-angled. Sides: apical, posterior and ventral angles broadly rounded.

 10-сентябрь 2018 г.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Excerpt 10 (2 weeks before departure) demonstrates how the participants' perceptions of the trip changed.
